1.0 Executive Summary

This session continued the mobile parity batch by eliminating ERP web-admin escapes from notification, approval, search, and record-link flows. A shared native routing helper now converts Prizm ERP URLs into in-app Expo routes where possible, falls back to the ERP hub for unmapped

internal URLs, and only permits true external destinations such as phone, email, maps, and non-company websites to leave the app. No backend API endpoints or database schemas were modified.

2.0 Scope of Work

2.1 Modules / Batches Covered

BATCH	MODULE(S)	PHASE(S) EXECUTED
Routing cleanup	Action Center; Approvals; Global Search; CRUD Detail; Purchase Approval; Customer/Lead detail	Inventory check; implementation; verification; documentation

2.2 Operations Inventoried

MODULE	OPERATIONS MAPPED	API ENDPOINTS	NEW ENDPOINTS
Cross-cutting native routing	1 routing policy surface	0 API endpoints touched	0 backend endpoints

3.0 Test Execution Results

3.1 API Endpoint Verification

#	ENDPOINT	METHOD	URL	HTTP	STATUS	NOTES
1	TypeScript compile	CLI	npx tsc --noEmit -p tsconfig.json	0	PASS	Clean compile after routing changes
2	Expo dependency drift check	CLI	npx expo install --check	0	PASS	Dependencies are up to date
3	ERP browser-exit sweep	CLI	rg Linking.openURL /MS/admin Open in web	0	PASS	Remaining openURL calls are phone, email, maps, or shared external-link helper
4	API endpoints	N/A	No API endpoint modified	N/A	PASS	Mobile-only routing/session change

3.2 Acceptance Criteria

SEVERITY	THRESHOLD	PASS	TOTAL	%	MET?
CRITICAL (S1)	100%	3	3	100%	Yes
