

QC Report — Native Admin Parity and Universal ERP App Links

Report Header

Field	Value
Report Code	PE-QAQC-QC-RPT-26015-R01
Session ID	admin-parity-universal-links-20260802
Date / Time	2026-08-02 04:55 +04:00
Agent / Model	Codex / GPT-5
Backend workspace	C:\wamp64\www\prizm331-wt-mobile-admin-parity
Mobile workspace	C:\wamp64\www\prizm-mobile-app-link-fix
Backend branches	feat/mobile-native-admin-parity-DESKTOP-9G05QC0; fix/cost-center-query-builder-DESKTOP-9G05QC0
Mobile branch	codex/native-parity-continuation
Turns	Current task continuation
Classification	Internal

1. Executive Summary

Release v1.16.0/code 34 broadens the Android verified App Link from selected ERP paths to every HTTPS path under <https://ms.prizm-energy.com/MS>. Android Settings now includes a direct shortcut to the app’s supported-link controls for Xiaomi/HyperOS and other devices that retain a browser preference. The exact reported Payment Request URL resolves to `com.prizmenenergy.mobile/.MainActivity`, and the published APK contains the verified `/MS` intent filter.

The native administration batch adds Knowledge Base create/edit/delete and publish controls, a dense Survey Results tab, and Cost Center members, supervisors, and activity tabs. Backend controllers mirror the real Perfex models, permissions, storage tables, and web workflows. Lists accept allowlisted Perfex-style AND/OR advanced filters with typed, multi-select, range, negative, and dynamic-date operators.

Live production probing caught and prevented a Cost Center list regression before the APK shipped: `staff_can()` reset CodeIgniter’s shared query builder, producing MySQL No tables used. The permission check now runs before list-query construction; a

regression contract was added and the redeployed endpoint returns HTTP 200.

2. Backend Verification

Check	Evidence	Result
PHP syntax	Advanced-filter helper plus Knowledge, Surveys, and Cost Centers controllers	PASS
Advanced-filter unit contract	<code>advanced_filters_contract_test.php</code>	PASS
API/web workflow contracts	Final Daleela suite	PASS — 72/72
Knowledge production list	<code>/api/knowledge_api?limit=2</code>	HTTP 200
Survey production list	<code>/api/surveys_api?limit=2</code>	HTTP 200; production currently has zero survey rows
Cost Center production list	Initial probe exposed HTTP 500; post-hotfix probe	HTTP 200
Combined Knowledge filter	subject contains + active IN, AND	HTTP 200; 2 rules applied
Combined Survey filter	subject contains + sender contains, OR	HTTP 200; 2 rules applied
Dynamic Cost Center filter	<code>created_</code> at relative date + status IN, AND	HTTP 200; 2 rules applied
Invalid filter field	non-allowlisted password	HTTP 400
Cost Center child reads	members, supervisors, activity	HTTP 200 for all three
Fork CI	Workflows 30724686469 and 30724943620	PASS
Production PRs	PrizmIT/prizm331#1193 and hotfix #1194	MERGED
Production deploys	Workflows 30724732433 and 30724970553	PASS
Production HEAD	4d257f54e5e6d4756be621129b5436c1c7ec0e2d	VERIFIED

3. Mobile Verification

Check	Evidence
Focused deployable parity suite	<code>npm run test:admin-parity</code> with clean backend source
TypeScript	<code>npx tsc --noEmit -p tsconfig.json</code>

Check	Evidence
Expo dependency matrix	<code>npx expo install --check</code>
Release metadata	<code>npm run verify:release</code>
Local production release build	Gradle assembleRelease; 696 tasks
Local APK	91,555,612 bytes; SHA-256 5b51001b5076f6dcf3a5bd23dd5652d1594
GitHub release workflow	30725249245
Published APK	91,563,048 bytes; SHA-256 3809566ecbb6f0640ba4baed702fd97224c
Published version/signature	v1.16.0/code34; signer FA:C6:17:45:DC:09:03:78:6F:B9:ED:E6:2A:96:2B:39:9F:73:48:F0
Packaged App Link manifest	autoVerify=true, host ms.prizm-energy.com, pathPrefix /MS
Android domain state	<code>pm get-app-links</code> ; production domain
Exact Payment Request resolver	Published APK versus Chrome for view_payment_request/1211
Published APK install	Emulator reports v1.16.0/code34

4. Acceptance Criteria

Severity	Criterion	Result
S1	Every /MS ERP HTTPS link is declared and verified for native Android handoff	100% PASS
S1	Exact Payment Request URL resolves to the installed production-signed app	100% PASS
S1	New client APIs are deployed before the APK and return authenticated production responses	100% PASS
S1	Invalid advanced-filter fields are rejected before database execution	100% PASS
S2	Combined AND, OR, multi-select, and dynamic-	100% PASS

Severity	Criterion	Result
S2	date filters survive production query execution	
	Knowledge and Cost Center workflows mirror web models and permission checks	100% contract PASS; read endpoints production- verified
S2	Survey result aggregation handles production storage	100% contract PASS; live result payload not exercised because production has no survey rows
S3	Legacy monolithic parity suite represents deployable backend truth	Corrected source root; suite now honestly exposes older Contacts parity debt

Release quality gate: PASS for v1.16.0. The scoped release is built, deployed, production-probed, published, installed, and App-Link verified. Overall native-web parity remains an open programme goal; it is not falsely declared complete.

5. Known Debt and Non-Regression Notes

- The legacy test:contracts suite stops at a pre-existing Contacts assertion for undeployed global_list_get. Before this correction it silently read a dirty prototype backend worktree. The focused v1.16.0 suite reads the clean deployable backend and passes.
- Production currently contains no surveys, so Survey Results could not be populated from a live record without creating test business data. Storage queries, routing, types, rendering, and response contracts pass.
- Authentication, CSRF classification, biometric vault, task-card, project multi-filter, and site-report image-path code were not modified in this release. Their previous evidence remains in report 26014; no real-account biometric credential was introduced for this session.
- Typing a URL manually into a browser address bar is browser navigation and may not trigger Android App Links. Tapping a link invokes Android resolution. Devices with a retained browser preference can use Settings → Open ERP links in Prizm CRM to enable supported links.

6. Code, Git, Deployment, and Rollback

Item	Evidence
Backend implementation	7767c42ea
Backend production merge	3b7991f0 via PrizmIT/prizm331#1193
Backend hotfix	ae5e00912
Backend hotfix production merge	4d257f54 via PrizmIT/prizm331#1194
Mobile implementation	d838c06
Mobile main merge	b0fe7af8 via Ghazalawy/prizm-mobile#2

Item	Evidence
Mobile rolling release	Workflow 30725249245; https://github.com/Ghazalawy/prizm-mobile/releases/latest
Backend rollback	Revert the two backend production merges through the normal PR and deploy-on-demand path
Mobile rollback	Revert v1.16.0 and republish v1.15.2

7. Sign-off

Role	Name	Status	Date
QA automation	Codex	Scoped release PASS; broader parity debt recorded	2026-08-02
Product reviewer	Osama Hassan	Requested exact- link correction, emulator verification, and deployment	2026-08-02

Generated under Prizm QA/QC Policy. Classification: Internal.
