

Prizm Energy QC Report 26025

QC Report — Supplier Invoice Native Parity and Production App Handoff

Report Header

Field	Value
Report Code	PE-QAQC-QC-RPT-26025-R01
Session ID	supplier-invoice-app-handoff-20260802
Date / Time	2026-08-02 17:40 +04:00
Agent / Model	Codex / GPT-5
Backend parity workspace	C:/wamp64/www/prizm331-wt-mobile-parity-next
Backend hotfix workspace	C:/wamp64/www/prizm331-wt-app-link-hotfix
Mobile workspace	C:/wamp64/www/prizm-mobile-app-link-fix
Backend parity branch	feat/mobile-native-parity-next-DESKTOP-9GO5QC0
Backend hotfix branch	fix/mobile-app-link-handoff-DESKTOP-9GO5QC0
Mobile branch	codex/full-native-parity-audit
Turns	Continuous parity task chain
Classification	Internal

1. Executive Summary

Supplier Invoices now have a native, dense purchasing workspace backed by the canonical Perfex web model. The scope includes permission-aware list/detail reads, server search and sorting, direct additive filters, Perfex advanced AND/OR filters, create/update/delete, PO-line import, supplier-item mappings, attachments, approval stages, and exact workflow actions. The purpose-built editor was inspected on the Android emulator and the real HTTP runtime suite exercised atomic persistence, multi-status selection, three-rule AND/OR logic, update, submit, detail, delete, and cleanup.

The reported Payment Request URL was then reproduced through Android and Chrome. Android domain verification, the installed signing certificate, and the exact native route were healthy. The remaining defect was the browser fallback: Chrome blocks unattended external-app launches, and the bridge immediately followed its web fallback before the user could act. Production now retains a clear one-tap handoff and uses a package-targeted, legacy-compatible `prizmcrm://ms.prizm-energy.com/MS/...` route understood by the current public APK. A live Chrome tap opened native Payment Request #1211 successfully.

The final parity audit also caught and corrected a Supplier Invoice funnel contract mismatch: `sequence_number` is now a numeric rule on both mobile and API. All list and CRUD audits pass. The backend app-link hotfix is deployed; no Android build was started, preserving the requested single final APK build. The overall native parity programme remains open.

2. Supplier Invoice Test Results

Check	Evidence	Result
Canonical MVC	SupplierInvoice web model, controller and views	REVIEWED before API design
Backend syntax	Purchase API and SupplierInvoice model lint	PASS
API contract	<code>supplier_invoices_api_contract_test.php</code>	PASS — 11/11
Runtime create	Real HTTP, two lines and approval stages	PASS
Search	Supplier invoice number	PASS — exact fixture
Direct multi-status	Draft + Cancelled	PASS — additive
Three-rule AND	supplier number + status + amount	PASS — exact result
Three-rule OR	mutually independent rules	PASS — exact result
Runtime update	Header and line persistence	PASS — atomic
Workflow	Submit and Draft + Submitted multi-status	PASS
Dense detail	Header, lines, files, history, stages, actions	PASS — HTTP 200
Delete and cleanup	Record absent after delete	PASS; zero temporary tables
Emulator editor	Hero, two-column fields, totals, line card, notes	PASS — visually inspected
TypeScript	<code>npx tsc --noEmit -p tsconfig.json</code>	PASS
Mobile contracts	<code>node scripts/test-mobile-contracts.mjs</code>	PASS
Release metadata	<code>npm run verify:release</code>	PASS — v1.17.0/code35
Expo dependencies	<code>npx expo install --check</code>	PASS
List audit	Search/filter/sort API contracts	PASS — 122 server + 2 client searchable; 124 filterable; 77 sortable; 0 skipped
CRUD audit	Advertised mutations versus backend methods	PASS — 357; 0 skipped
Web-menu parity	Native static destinations	110/347 covered; 237 missing; 4 dynamic unresolved

3. Production App-Handoff Test Results

Check	Evidence	Result
Production association	<code>/.well-known/assetlinks.json</code>	HTTP 200; package/fingerprint match
Android domain state	<code>pm get-app-links com.prizmenenergy.mobile</code>	<code>ms.prizm-energy.com: verified ; handling enabled</code>
Exact HTTPS intent	Payment Request 1211 URL	PASS — Prizm MainActivity and native record
Production browser bridge before fix	Real Chrome document navigation	FAIL reproduced — timer fell through to web login

Check	Evidence	Result
Corrected bridge contract	PHP suite	PASS — 11/11
Background/API/upload safety	Predicate matrix	PASS — never intercepted
Legacy public-APK compatibility	Host/path custom scheme	PASS — route resolves to Payment Request 1211
Real production Chrome handoff	Orange Open Prizm CRM action	PASS — native Payment Request #1211
Native record identity	Emulator UI dump	MT-26080002 , Fully approved
Live bridge response	Android document request	HTTP 200; one-tap copy and prizmcrm scheme present; blocked timer absent
Fork CI	Ghazalawy/prizm331 PR #320	PASS — PHP 8.3 contracts
Upstream integration	PrizmIT/prizm331 PR #1199	MERGED
Production deploy	Workflow 30750340830	PASS — HEAD df0dcfa973

4. Acceptance Criteria

Severity	Criterion	Result
S1	Supplier Invoice reads and mutations mirror canonical web behavior	100% PASS
S1	Direct multi-value and custom AND/OR filters are additive	100% PASS
S1	Exact Payment Request browser handoff reaches the installed app	100% PASS in production emulator test
S1	API, uploads and background fetches are not intercepted	100% PASS
S2	Supplier Invoice editor is dense, identified and mobile-responsive	100% PASS for tested editor states
S2	Current public APK understands the production bridge	100% PASS
Release	Avoid another paid Android build before final parity	PASS — no Android build triggered

Scoped quality gate: PASS. Production app-handoff gate: PASS. Overall parity programme: OPEN.

5. Code Changes

Backend parity branch

- modules/api/controllers/Purchase_api.php
- modules/api/config/routes.php
- modules/przpurchase/models/SupplierInvoice_model.php
- modules/api/tests/supplier_invoices_api_contract_test.php

- `modules/api/tests/supplier_invoices_runtime_test.php`
- Commits `f7b847e4e` and `ab6fcd90c`

Backend production hotfix

- `modules/api/helpers/mobile_app_link_helper.php`
- `modules/api/tests/mobile_app_link_bridge_contract_test.php`
- Hotfix commit `f9e10f8e9` ; fork merge `f423d7eba` ; production merge/deploy `df0dcfa973`

Mobile candidate

- `components/crud/SupplierInvoiceEditor.tsx`
- `components/crud/SupplierInvoiceSummary.tsx`
- `components/crud/CrudForm.tsx`
- `components/crud/CrudDetail.tsx`
- `lib/module-registry.ts`
- `lib/native-routing.ts`
- `scripts/test-mobile-contracts.mjs`
- Commits `2c08131` , `cb99eb1` , and `66641d1`

The frontend-polish skill influenced the dense Supplier Invoice hierarchy, responsive field grouping, totals, and line-card presentation. The documents skill was used only for the mandatory report render/inspection workflow.

6. Deployment Status

Target	Status
Browser-to-app backend hotfix	DEPLOYED — production HEAD <code>df0dcfa973</code>
Hotfix PRs	Ghazalawy #320 and PrizmiT #1199 merged
Hotfix workflow	<code>30750340830</code> passed
Supplier Invoice backend parity	CHECKPOINTED, not deployed with the isolated hotfix
Mobile parity branch	LOCAL CHECKPOINTS, not pushed in this slice
Android APK	NOT BUILT — single final build preserved
Release metadata	v1.17.0 / versionCode 35 unchanged

7. Evidence and Residual Risk

- Native Payment Request evidence: `C:/wamp64/tmp/payment-request-1211-app-link.png` .
- Supplier Invoice editor evidence: `C:/wamp64/tmp/supplier-invoice-editor-emulator.png` , `supplier-invoice-editor-lines-emulator.png` , and `supplier-invoice-editor-line-card-emulator.png` .
- Supplier Invoice detail was verified through real HTTP data, type checks, contracts, and source review; a live fixture detail screenshot was not retained because the isolated local server cold start did not finish within the visual attempt.
- Chrome security requires a user gesture once a URL is already inside Chrome. External verified App Link taps remain automatic; browser-origin navigation now presents a deterministic one-tap handoff instead of silently returning to web login.

- Static parity remains 110/347; 237 static destinations plus 4 dynamic expressions remain for future native work.
- User-owned `artifacts/` remains untouched.

8. Sign-Off

Role	Status
Engineering / Codex	Scoped implementation, production hotfix and verification complete
QA/QC	PASS for Supplier Invoice candidate and production app handoff
Product owner	Physical-device confirmation requested; overall parity acceptance remains open
