

QC Report — Android ERP App Links

Report Header

Field	Value
Report Code	PE-QAQC-QC-RPT-26011-R01
Session ID	android-erp-app-links-emulator-20260730
Date / Time	2026-07-30 22:21:00 +04:00
Agent / Model	Codex / GPT-5
Workspace	C:\wamp64\www\prizm-mobile
Mobile branch	codex/erp-app-links
Classification	Internal

1. Executive Summary

Android release candidate v1.14.4 now declares verified App Links for `https://ms.prizm-energy.com/MS` and `/MS/admin/*`. Incoming ERP URLs pass through the existing native route resolver: recognized record URLs open their native mobile screen, while unmatched ERP pages open the native ERP module hub. Upload/download paths are not claimed.

The implementation and Android emulator behavior pass. Production activation remains intentionally pending because it requires both publishing v1.14.4 and placing `assetlinks.json` at the website root; the live URL currently returns HTTP 404.

2. Implementation

Layer	Change
Android manifest	Expo intentFilters emits VIEW, DEFAULT, BROWSABLE, and autoVerify=true for the production ERP host and paths.
Cold/warm start routing	app/+native-intent.ts rewrites operating-system URLs through resolveIncomingAppLink().
Native destination	Known ERP records use the existing route map; unknown internal ERP pages use /(tabs)/erp.
Website association	public/.well-known/assetlinks.json contains package com.prizmenenergy.mobile and the stable SHA-256 signing fingerprint.
Safety boundary	/MS/uploads/* and unrelated external URLs are not claimed or rewritten.

3. Android Emulator Verification

Tests ran on emulator-5554 with the x86_64 debug APK signed by the same certificate as releases.

Test	Expected	Observed	Result
Manifest inspection	Verified HTTPS filter for ERP paths	Literal /MS, prefix /MS/admin, AutoVerify=true	PASS
Package-targeted Project URL	Native Project 42 detail	Opened P1051 - SEALING OF CABLE ENTRY with full native detail UI	PASS
Unmatched ERP dashboard URL	Native ERP hub	Opened ERP modules list; browser was not opened	PASS
Simulated verified-domain launch without package hint	Android selects Prizm CRM	com.prizmenenergy.mobile/.MainActivity selected automatically	PASS
Automatic deep route after selection	Native Project 42 detail	Project detail rendered after cold start	PASS
Emulator cleanup	Restore released app/state	v1.14.3 restored; test-only domain override cleared; Metro stopped	PASS

Screenshot evidence: C:\Users\osama\AppData\Local\Temp\prizm-app-links-project-final.png.

4. Automated Quality Gates

Check	Result
Release metadata	PASS — v1.14.4, Android versionCode 30
TypeScript	PASS
Expo dependency alignment	PASS — dependencies up to date
Mobile contract tests	PASS — includes App Link manifest, association, cold-start, internal fallback, and external passthrough
CRUD contract audit	PASS — 303 mutations, 0 skipped
List contract audit	PASS — 105 server-searchable + 2 client-searchable, 107 filterable, 59 sortable, 0 skipped
Android native APK build	PASS — x86_64 debug APK, 65,966,484 bytes
Android production export	PASS — Hermes bundle, 44 assets
Git whitespace check	PASS

Acceptance Criteria

Severity	Criterion	Result
S1	A supported ERP HTTPS link is handled by the installed app	100% PASS locally
S1	The link resolves to the matching native record	100% PASS locally
S1	Unknown ERP pages remain inside the app	100% PASS locally

Severity	Criterion	Result
S2	External and upload URLs are not captured by this feature	100% PASS by contract/manifest inspection
S1	Production domain verification	PENDING — root association file not deployed
S1	Published v1.14.4 APK verification	PENDING — branch not pushed/deployed

Local QC gate: PASS. Production/deployment gate: PENDING, not failed.

5. Code, Git, and Deployment

Item	Evidence
Mobile implementation commit	9a716ca
Mobile branch	codex/erp-app-links
Release candidate	v1.14.4 / Android versionCode 30
Production asset association	Pending: deploy assetlinks.json to /var/www/html/.well-known/assetlinks.json
Mobile deployment	Not pushed or released in this session
Rollback	Revert commit 9a716ca; remove the website association file if deployed

6. Remaining Product-Parity Scope

The automated checkpoint covers 131 registered resources, 43 workflow-action modules, 107 searchable/filterable lists, 59 sortable lists, and 303 advertised mutations with zero skipped contract checks.

Six backend contract repairs remain before full web/mobile parity can be claimed: Task Templates/Task Manage, Product Families, Client Items composition review, Cost Center child endpoints, Survey Results, and Knowledge article CRUD. Separately, several lower-priority web-only workflows remain deliberately deferred by product decision.

7. Sign-off

Role	Name	Status	Date
QA automation	Codex	Local implementation, contracts, native build, and emulator gates PASS	2026-07-30
Product reviewer	Osama Hassan	Requested ERP links open the installed app	2026-07-30
