

Prizm QC Report 26019

QC Report — Native Setup Administration and Shared CRUD Stability

Report Header

Field	Value
Report Code	PE-QAQC-QC-RPT-26019-R01
Session ID	setup-native-admin-parity-20260802
Date / Time	2026-08-02 12:09 +04:00
Agent / Model	Codex / GPT-5
Backend workspace	C:\wamp64\www\prizm331-wt-mobile-parity-next
Mobile workspace	C:\wamp64\www\prizm-mobile-app-link-fix
Backend branch	feat/mobile-native-parity-next-DESKTOP-9G05QC0
Mobile branch	codex/full-native-parity-audit
Classification	Internal

1. Executive Summary

This scoped batch adds twelve native, administrator-only Setup catalog pages: Customer Groups, Ticket Priorities, Predefined Replies, Ticket Statuses, Ticket Services, Lead Sources, Lead Statuses, Taxes, Currencies, Payment Modes, Expense Categories, and Contract Types. Each page supports native list, search, sorting, Perfex-compatible advanced filters, detail, create, edit, and guarded delete; Currencies also exposes the canonical Make Base action.

The web MVC models and permission behavior were read before implementation. The API uses explicit resource and writable-field allowlists, canonical Perfex models, strict validation, HTML purification for predefined replies, protected default-record deletion, no-trace 404 responses for non-admin users, and authenticated headers through the shared mobile API layer.

Emulator testing found and corrected two cross-cutting defects. Setup modules initially flattened logical filters into ordinary query parameters, so two visibly active rules were ignored by the API. They now send the full Perfix filters JSON group. Generic CRUD forms also reinitialized after every keystroke because route-parameter object identity changed; a stable initialization guard now preserves typed edits, and a stable empty custom-fields collection removes the associated maximum-update-depth loop.

The scoped quality gate passes. Deployment remains held for the user's requested single consolidated Android release. The broader web-parity programme improves from 93/347 to 105/347 static destinations; 242 static destinations and 4 dynamic destinations remain open.

2. Test Results

Check	Evidence	Result
TypeScript	<code>npx tsc --noEmit -p tsconfig.json</code>	PASS
Mobile contracts	<code>npm run test:contracts</code>	PASS
Release metadata safety	<code>npm run verify:release</code>	PASS — unchanged v1.17.0/code35
Web-menu parity audit	<code>npm run audit:web-parity</code>	PASS — 105/347 covered; 242 missing; 4 dynamic
Backend syntax	PHP 8.2 lint on routes, controller, and test	PASS
Backend contract	<code>setup_api_contract_test.php</code>	PASS
Diff hygiene	<code>git diff --check</code> in both worktrees	PASS
Setup list matrix	All 12 authenticated admin list endpoints	HTTP 200
No-trace permission	Non-admin Setup request	HTTP 404
Unauthenticated request	REST parent token guard	HTTP 404, token missing
Search	Customer and catalog searches returned the exact match	PASS
Unsupported filter	Unknown advanced-filter field	HTTP 400
Logical OR API	Two exact Ticket Service branches	PASS — both rows only
Logical AND API	Two simultaneous supported rules	PASS
Reversible CRUD API	Create, update, detail, delete across all 12 resources	PASS; fixtures removed
Duplicate tax guard	Duplicate name/rate	HTTP 409
Payment Mode validation	invoices-only plus expenses-only	HTTP 400
Protected Ticket Status	Default status deletion	HTTP 409

Check	Evidence	Result
Base Currency action	Make current base idempotently	HTTP 200, changed=false
Emulator logical OR	Customer Group ID=2 OR ID=3	PASS — exactly 2 rows: OIL & GAS and Infrastructure
Emulator logical AND	Customer Group ID=2 AND ID=3	PASS — empty result state
Emulator form typing	Generic create form retains 260802 after rerender	PASS
Emulator CRUD	Create 260802, edit to 260803, detail verify, delete	PASS; list restored to 3
Render-loop regression	List/detail after CRUD and Fast Refresh	PASS — no developer warning
Rich detail density	Payment Modes list and Bank detail	PASS — module identity and scope fields visible

3. Acceptance Criteria

Severity	Criterion	Result
S1	Multiple advanced rules preserve AND/OR semantics through the mobile transport	100% PASS
S1	Generic create/edit fields retain user input and do not reset on rerender	100% PASS
S1	Setup mutations are admin-only, allowlisted, validated, and no-trace	100% PASS
S1	Reversible CRUD leaves no QA fixtures	100% PASS
S2	Setup list/detail pages identify the module and render densely without overlap	100% PASS
S2	Protected defaults and base-currency rules mirror canonical web behavior	100% PASS
Programme	Every static web destination has a native equivalent	OPEN — 105/347 (30.3%) covered

Scoped quality gate: PASS. Deployment gate: HELD. Overall native-web parity programme: OPEN.

4. Code, Git, and Deployment

Item	Evidence
Mobile implementation	ddf454e
Backend implementation	5bcc4caeb
Mobile files	Shared CRUD form/filter fixes, 12 registry definitions, native aliases, contracts
Backend files	Setup REST controller, three explicit routes, static contract test
Release metadata	Deliberately unchanged until the consolidated final release
Push / PR / deploy	Not performed
Production data	Not touched
Local QA fixtures	Customer Group 260802/260803 and API matrix fixtures removed
User files	Untracked artifacts/ preserved
Rollback	Revert the two scoped commits before any future merge

5. Emulator Evidence and Notes

- Emulator: emulator-5554, Android development build.
- Correct OR result hierarchy: C:\Users\osama\AppData\Local\Temp\prizm-result-fixed.xml.
- Correct AND empty state: C:\Users\osama\AppData\Local\Temp\prizm-result-and.xml.
- Reversible form/CRUD evidence: prizm-form-fixed.xml, prizm-edit-result.xml, and prizm-delete-result.xml in the same temporary directory.
- Rich Setup detail evidence: C:\Users\osama\AppData\Local\Temp\prizm-payment-mode-detail.xml.
- The temporary WAMP worktree URL override was removed before commit; lib/environment.ts matches the branch baseline.
- An adb input text development-client shortcut could reload the bundle when rapid text contained r; numeric UI values avoided that emulator-only shortcut. The application filter and CRUD results were verified after the bundle stabilized.

6. Sign-off

Role	Name	Status	Date
QA automation	Codex	Scoped PASS; deployment held; parity programme open	2026-08-02
Product reviewer	Osama Hassan	Final acceptance pending	Pending

Role	Name	Status	Date
		consolidated release	

Generated under Prizm QA/QC Policy. Classification: Internal.
