

Prizm Energy QC Report 26021

QC Report — Native Roles, Combined Filters, and App-Link Verification

Report Header

Field	Value
Report Code	PE-QAQC-QC-RPT-26021-R01
Session ID	native-roles-app-link-filters-20260802
Date / Time	2026-08-02 13:40 +04:00
Agent / Model	Codex / GPT-5
Backend workspace	C:\wamp64\www\prizm331-wt-mobile-parity-next
Mobile workspace	C:\wamp64\www\prizm-mobile-app-link-fix
Backend branch	feat/mobile-native-parity-next-DESKTOP-9G05QC0
Mobile branch	codex/full-native-parity-audit
Turns	Continuous parity task chain
Classification	Internal

1. Executive Summary

This scoped batch adds Setup → Roles as a fully native administrative workflow after reading Perfex’s canonical Roles controller, model, views, helper, and live permission registry. The mobile module now provides list, search, sorting, Perfex advanced filters, dense detail, create, edit, guarded delete, assigned-staff coverage, and a live permission-matrix editor.

The permission editor preserves the web rules: View and View Own are mutually exclusive; hook-defined blocked capabilities cannot coexist; not-applicable capabilities remain disabled; unknown features/capabilities are rejected; and an administrator may explicitly propagate changed role permissions to staff assigned to the role. The API delegates writes to `Roles_model`, enforces the canonical `roles` capability for each action, and returns no-trace 404 responses to callers without access.

Emulator CRUD testing created one reversible role fixture, changed its grants, and removed it. The test exposed two regressions that were corrected before sign-off: Perfex’s cached `Roles_model::get()` could return a pre-edit object within the write request, and requesting a missing role could dereference a null model row and produce HTTP 500. Write responses now read through the database, and missing/deleted records reliably return HTTP 404.

The rigorous funnel test used two custom logical rules against live Role data. AND returned no rows for mutually exclusive exact names; changing only the match type to OR returned exactly the two expected roles. The shared Advanced Filters screen was also moved into the Android top safe area after visual testing showed its header and Clear all action underneath the status bar.

The reported Payment Request App Link was reproduced with the exact URL. The published rolling APK (`c06f94d`) predates the committed host-wide Android handoff hardening (`006bf61`), explaining the phone fallback to the browser. On the hardened emulator build, Android verified `ms.prizm-energy.com` , resolved the exact URL to `com.prizmenenergy.mobile/.MainActivity` , and routed record 1211 to the native Payment Request screen. The production `assetlinks.json` certificate fingerprint matches the installed application. Publishing remains held for the requested single consolidated Android build.

The scoped quality gate passes. Static web-menu parity is now 107/347, leaving 240 static destinations and 4 dynamic destinations open.

2. Test Results

Check	Evidence	Result
TypeScript	<code>npx tsc --noEmit -p tsconfig.json</code>	PASS
Mobile contracts	<code>npm run test:contracts</code> against current backend worktree	PASS
Release metadata safety	<code>npm run verify:release</code>	PASS — unchanged v1.17.0/code35
Web-menu parity audit	<code>npm run audit:web-parity</code>	PASS — 107/347 covered; 240 missing; 4 dynamic
Backend syntax	PHP 8.3.14 lint: controller, routes, contract test	PASS
Roles backend contract	<code>roles_api_contract_test.php</code>	PASS
Diff hygiene	<code>git diff --check</code> in both worktrees	PASS
Roles list	Authenticated administrator list	HTTP 200; 21 baseline roles
Roles App Link	<code>/MS/admin/roles</code> into native module	PASS
Role detail App Link	<code>/MS/admin/roles/role/24</code> into native record	PASS
Permission schema	<code>GET /api/roles_api/permissions</code>	HTTP 200; live hook-extended registry
Role create	Numeric fixture <code>260901</code> with View Global + Create	HTTP 201; list 21 → 22
Role detail	Fixture ID 24	HTTP 200; two grants summarized
Role update	Rename <code>260902</code> , add Edit grant	HTTP 200; three grants returned and persisted
Role delete	Fixture ID 24	HTTP 200; list 22 → 21
Post-delete detail	<code>GET /api/roles_api/24</code>	HTTP 404; native Record not found state
Combined AND filter	Admin Manager equals AND Field Engineer equals	HTTP 200; zero rows; correct empty state
Combined OR filter	Same two exact rules, match type OR	HTTP 200; exactly two expected rows
Filter safe area	Reloaded emulator screenshot + UI bounds	PASS — header shifted below 128 px status inset

Check	Evidence	Result
Payment Request Android resolution	Exact URL ending <code>/view_payment_request/1211</code>	PASS — app MainActivity selected
Payment Request native rewrite	Exact URL to <code>/(tabs)/approvals/payment_request/1211</code>	PASS
Website association	Live <code>/.well-known/assetlinks.json</code>	HTTP 200; matching SHA-256 fingerprint
Published APK provenance	Rolling release SHA <code>c06f94d</code> vs hardening <code>006bf61</code>	Confirmed published APK predates fix

3. Acceptance Criteria

Severity	Criterion	Result
S1	Role permissions mirror the live Perfex registry and conflict rules	100% PASS
S1	Role writes honor capability gates and canonical model behavior	100% PASS
S1	Missing/deleted roles return 404, never 500	100% PASS
S1	CRUD testing is reversible and leaves no QA role fixture	100% PASS
S2	Multi-rule AND/OR filters update the live result set correctly	100% PASS
S2	Advanced Filters controls are reachable below Android system UI	100% PASS
S2	Exact Payment Request URL is claimed and mapped by hardened build	100% PASS
S2	Web Role list/detail links resolve to native screens	100% PASS
Programme	Every static web destination has a native equivalent	OPEN — 107/347 (30.8%) covered

Scoped quality gate: PASS. Deployment gate: HELD for one consolidated final build. Overall native-web parity programme: OPEN.

4. Code, Git, and Deployment

Item	Evidence
Backend Roles implementation	<code>caecbf51f</code>
Mobile Roles/filter/link implementation	<code>adb0c2</code>
Existing host-wide App Link hardening	<code>006bf61</code> — committed after current published APK

Item	Evidence
Current published rolling APK	c06f94d ; release asset digest ef4c4b88...
Release metadata	Deliberately unchanged until the consolidated final release
Push / PR / deploy	Not performed in this batch
Production data	Not touched
Local QA fixture	Role ID 24 deleted; baseline restored to 21 roles
User files	Untracked artifacts/ preserved
Rollback	Revert the scoped mobile/backend commits before any future merge

5. Emulator and HTTP Evidence

- Emulator: emulator-5554 , Android development build.
- Role list/detail/form evidence: artifacts/roles-list-current.png , artifacts/role-detail.xml , artifacts/role-edit-expanded.xml , artifacts/role-updated.xml .
- CRUD completion: artifacts/roles-after-delete.xml shows 21 total and no fixture.
- Logical filter evidence: artifacts/roles-and-result.xml shows no-result AND behavior; artifacts/roles-or-result.xml shows two total and both expected roles.
- Safe-area evidence: artifacts/filter-safe-area-final.png and XML place header controls at y=156..221 rather than y=28..93 under the status bar.
- App-link evidence: Android package query listed Prizm CRM and Chrome; domain state was verified; intent launch selected com.prizmenenergy.mobile/.MainActivity .
- Exact Payment Request native evidence: artifacts/payment-link.xml was owned by the Prizm package and displayed the native Payment Request state for ID 1211 against the local test backend.
- Apache evidence recorded HTTP 200/201 for Role reads/writes, HTTP 200 for both combined-filter queries, and corrected HTTP 404 after deletion.
- The temporary WAMP worktree URL override was removed before commit; lib/environment.ts matches the branch baseline.

6. Sign-off

Role	Name	Status	Date
QA automation	Codex	Scoped PASS; deployment held; parity programme open	2026-08-02
Product reviewer	Osama Hassan	Final acceptance pending consolidated release	Pending

Generated under Prizm QA/QC Policy. Classification: Internal.
