

Prizm Energy QC Report 26023

QC Report — Native Email Templates and Logical Filter Regression

Report Header

Field	Value
Report Code	PE-QAQC-QC-RPT-26023-R01
Session ID	native-email-templates-parity-20260802
Date / Time	2026-08-02 15:57 +04:00
Agent / Model	Codex / GPT-5
Backend workspace	C:/wamp64/www/prizm331-wt-mobile-parity-next
Mobile workspace	C:/wamp64/www/prizm-mobile-app-link-fix
Backend branch	feat/mobile-native-parity-next-DESKTOP-9GO5QC0
Mobile branch	codex/full-native-parity-audit
Turns	Continuous parity task chain
Classification	Internal

1. Executive Summary

This scoped batch adds Setup → Email Templates as a complete native administration workflow after reading Perfex’s canonical Emails controller, Emails_model, template list, editor view, permission checks, merge-field registry, and slug-wide enable/disable behavior.

The mobile app now provides a searchable, sortable, filterable 101-template list; clear module identity; dense purpose-built summary; responsive multilingual editor; sender and delivery controls; language coverage; cursor-aware merge-field insertion; and native routing for both the list and individual templates. Templates are fixed system records, so create and delete are intentionally unavailable.

The API exposes an English-canonical list while editing every language variant that shares the selected slug. It delegates updates to Perfex’s Emails_model, filters merge fields by template type and slug, protects the two-factor authentication template from being disabled, and applies status changes slug-wide exactly like the web UI.

Emulator testing caught a real regression before commit: the native quick chips submitted active as a MultiSelectRule while the endpoint declared it as a BooleanRule. Enabled + Disabled therefore returned zero records. The endpoint and mobile contract now agree on MultiSelectRule. Enabled alone returned 14 records; adding Disabled retained both selections and returned all 101.

The same funnel retained an independent Template contains Invoice rule. Enabled AND Invoice returned 0 records; changing only match_type to OR returned 21. This proves multi-rule state, status arrays, logical grouping, serialization, API query construction, and live list refresh all work together.

The scoped gate passes. Static web-menu parity is now 109/347, leaving 238 static destinations and 4 dynamic destinations open. Deployment remains held for the requested single consolidated Android release.

2. Test Results

Check	Evidence	Result
TypeScript	npx tsc --noEmit -p tsconfig.json	PASS
Mobile contracts	node scripts/test-mobile-contracts.mjs	PASS
Release metadata safety	npm run verify:release	PASS — unchanged v1.17.0/code35
List capability audit	audit-list-contracts.mjs	PASS — 121 server + 2 client searchable; 123 filterable; 76 sortable; 0 skipped
CRUD capability audit	audit-crud-contracts.mjs	PASS — 354 mutations; 0 skipped
Backend syntax	PHP 8.3.14 lint	PASS
Email Templates contract	email_templates_api_contract_test.php	PASS — 7/7
Shared logical filters	advanced_filters_contract_test.php	PASS
Daleela regression suite	mcp_api_defects_daleela_contract_test.php	PASS — 96/96
Web MVC parity source	Emails controller/model/list/editor/merge fields	REVIEWED
Authenticated list	GET /api/email_templates_api	HTTP 200; 101 templates
Search	Invoice	HTTP 200; 8/8 API and SQL
Direct combined AND	Type = client AND Active = disabled	HTTP 200; 9/9 API and SQL
Direct combined OR	Type = client OR Active = enabled	HTTP 200; 23/23 API and SQL
Detail	Template ID 1	HTTP 200; 27 variants and 27 merge fields
Reversible update	Append QA marker, verify, restore original	PASS
Activity rollback	QA activity rows after restore	0 remaining
Emulator single status	Enabled	14 records
Emulator multi-status	Enabled + Disabled	101 records; both chips selected
Emulator mixed AND	Enabled AND Template contains Invoice	0 records
Emulator mixed OR	Enabled OR Template contains Invoice	21 records
Native list visual QA	Emulator screenshot	PASS — dense rows; no duplicate status text
Native detail visual QA	Emulator screenshot	PASS — readable hero, structured preview, 27-language coverage
Native editor visual QA	Emulator screenshot	PASS — responsive proportions, proper switches, no overlap
Language and merge fields	Bulgarian selection and merge-field panel	PASS — 27 safe tokens

Check	Evidence	Result
Runtime log	Android logcat	PASS — no React/app runtime errors
Cleanup	Local API override/router/port	PASS — override reverted; PID stopped; port 8092 closed

3. Acceptance Criteria

Severity	Criterion	Result
S1	Updates preserve canonical Perfex email-template behavior	100% PASS
S1	QA edit is exactly restored with no residual activity rows	100% PASS
S1	Two-factor template cannot be disabled	100% PASS
S2	Search and multi-status chips update live results	100% PASS
S2	Multiple custom rules remain additive under AND and OR	100% PASS
S2	Every language variant can be edited in one native workflow	100% PASS
S3	Module identity, content, delivery, and coverage are dense and readable	100% PASS
Programme	Every static web destination has a native equivalent	OPEN — 109/347 (31.4%) covered

Scoped quality gate: PASS. Deployment gate: HELD for one consolidated APK. Overall parity programme: OPEN.

4. Code Changes

Backend

- modules/api/controllers/Email_templates_api.php
- modules/api/config/routes.php
- modules/api/tests/email_templates_api_contract_test.php
- Commit 3973fecf9 — feat(api): add native email template parity

Mobile

- components/crud/EmailTemplateEditor.tsx
- components/crud/EmailTemplateSummary.tsx
- components/crud/CrudFormScreen.tsx
- components/crud/CrudDetailScreen.tsx
- lib/module-registry.ts
- lib/native-routing.ts
- scripts/test-mobile-contracts.mjs

- Commit e11b5c7 — feat: add native email template administration

The frontend-polish skill directly influenced this batch: the Prizm visual language was preserved, expected field lengths determined responsive proportions, dark-surface contrast was corrected from emulator evidence, fragile utility dimensions were replaced for switches, and list/detail/editor screens were visually rechecked after every correction.

5. Deployment Status

Target	Status
Backend production	NOT DEPLOYED — checkpoint committed locally
Mobile GitHub/main	NOT PUSHED
Android APK	NOT BUILT — preserving the requested single final build
Release metadata	v1.17.0 / versionCode 35 unchanged
Existing phone App Link behavior	Remains tied to the currently installed APK until final consolidated release

6. Evidence and Residual Risk

- List evidence: C:/wamp64/tmp/codex-both-status.png.
- Detail evidence: C:/wamp64/tmp/codex-email-detail-final.png.
- Editor evidence: C:/wamp64/tmp/codex-email-editor-final.png.
- Merge-field evidence: C:/wamp64/tmp/codex-email-editor-merge.png.
- Temporary local API routing was removed and port 8092 was confirmed closed.
- User-owned artifacts/ remains untouched.
- The current installed APK still predates the consolidated candidate, so final phone verification remains mandatory after the one requested release.
- The aggregate parity audit still reports 238 missing static destinations and 4 dynamic paths; this scoped report does not represent programme completion.

7. Sign-Off

Role	Status
Engineering / Codex	Scoped implementation and verification complete
QA/QC	PASS for native Email Templates and multi-rule filter regression
Product owner	Final acceptance pending consolidated release
